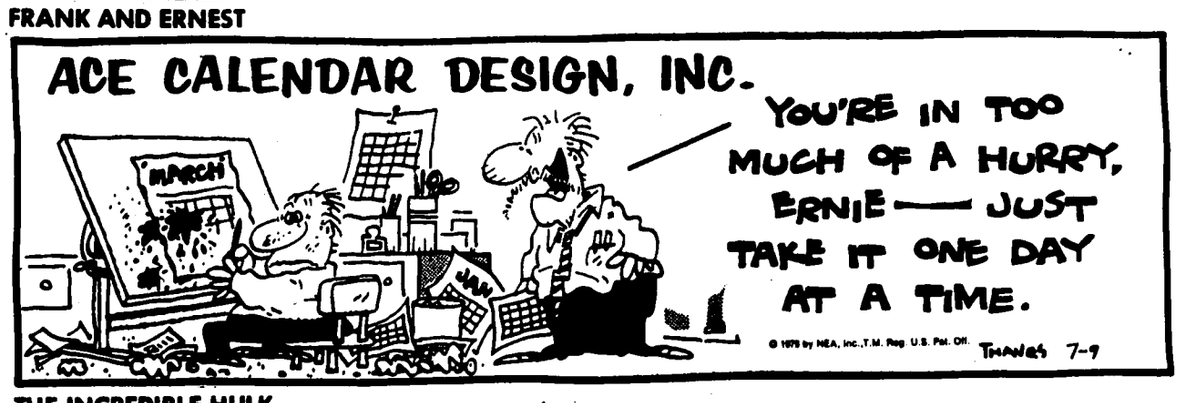
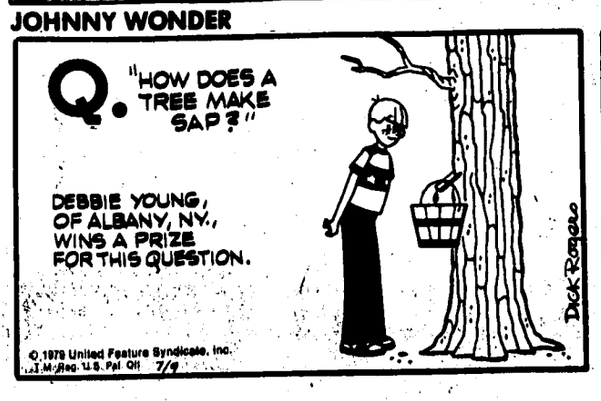
FRANK AND ERNEST



THE INCREDIBLE HULK

JOHNNY WONDER



A. Sap is the liquid that flows through trees and other plants and helps them live and grow. The roots of a tree draw from the soil a combination of water and dissolved minerals. This liquid sap flows through tiny tubes in the trunk and branches, up to the leaves. Through a process called "photosynthesis," the green chlorophyll in the leaves combines the liquid with sunlight and air to make food for the tree. The sap is now fortified with plant food made by the leaves, and minerals acquired from the soil. As the sap flows through the tree it feeds every living cell.

You can win a *World Almanac* if your question is selected. Send your name and age to JOHNNY WONDER, c/o this newspaper, P.O. Box 1338, (DA) Santa Cruz, CA 95061.
